

High Performance Recessed Dynamic Multifunction

The HPR Dynamic Multifunction (DM) is a high-performance recessed LED luminaire that provides exceptional visual comfort and versatility. With dual-mode functionality, it features a low-lumen mode for general ambient lighting and a high-lumen mode for tasks like data analysis and examinations, making it ideal for educational, healthcare, and life sciences settings.

In low-lumen mode, it offers comfortable ambient lighting with minimal glare through indirect illumination. The high-lumen mode delivers full brightness for concentrated tasks. A barrier prevents light spillage from the center optic to the sides, while an optional antimicrobial powder-coated finish enhances hygiene.
